

Section 1: Purpose-led Governance and Board Leadership

Primary Purpose of Board

CEOs most frequently identify their board's primary purpose as a strategic partner to management (43%), followed by overseeing financial strategy and resource allocation (36%). CEOs could select up to two roles, as boards may have more than one primary purpose (total selections >100%). Education and training organisations were 11 percentage points more likely than total not-for-profits to report 'overseeing financial strategy and resource allocation' as their board's primary purpose.

Board and management alignment

Alignment between boards and management understanding and respecting their roles is generally strong, with 37% of CEOs stating that the roles are completely aligned. However, some organisations may still face risks associated with role ambiguity or boundary overlap. It highlights an opportunity to enhance role clarity and optimise governance effectiveness. Education and training organisations are 12 percentage points less likely to report that board and management roles are mostly aligned.

Board structure and composition for effective governance

Boards most commonly report that their structure ensures integrated financial and non-financial reporting (58%) and aligns composition to reflect stakeholder experience and perspectives (42%). In contrast, fewer report that their board structure oversees performance metrics on sustainability (23%) and oversees performance metrics on culture (11%), highlighting an opportunity to strengthen how board structures support broader organisational priorities. Education and training organisations are 8 percentage points less likely to report that their board fully aligns composition to reflect stakeholder experience and perspectives.

Education and training: 93 CEOs

Extent of formal board oversight across key areas

Many boards embed oversight of core organisational purpose (61%), long-term strategy (61%), and financial sustainability and value creation (42%) within strategic oversight. However, fewer boards embed organisational culture (34%), stakeholder governance (20%), and environmental and social externalities (16%), highlighting an opportunity for organisations to more consistently integrate factors that influence strategy, risk, and long-term value. Education and training organisations are more likely to report that their board embeds organisational culture into strategic oversight.

Board methods of evaluating own governance and oversight effectiveness

While organisations routinely evaluate management and organisational performance, board governance itself is often assessed more informally. With 56% relying on informal or ad hoc discussions and 47% using assessments of board composition and skills alignment with strategy, many boards have an opportunity to strengthen oversight and better enable organisational performance by adopting more formal, objective evaluation methods. Education and training organisations are more likely to rely on 'informal or ad hoc discussions'.

Effectiveness of CEO–chair relationship

The CEO–Chair relationship is central to governance, sitting at the interface between board and management and shaping oversight, communication, and strategic alignment. CEO–Chair relationships are generally strong: 64% of CEOs rated the chair "highly effectively" 'supports mutual support and trust', followed by 'supports effective communication and collaboration' (59%), and 'enables leadership effectiveness' (58%). The lower ratings for 'contributes to strategic priorities' and 'provides clear expectations and feedback' indicate opportunities to strengthen these relationships to enhance the CEO's ability to lead optimally.

Education and training: 93 CEOs

Board effectiveness in enabling organisational purpose

Even some of the strongest boards have room for improvement: 40% of CEOs rate their board as 'highly effective' in supporting oversight of compliance and organisational risks, followed by 37% in supporting long-term orientation, and 35% in supporting constructive board culture and dynamics. More than 60% of boards are not highly effective in enabling organisational purpose in these factors; if these are not addressed, they risk leaving value on the table. Education and training organisations are less likely than total not-for-profits to rate highly on 'supporting social sustainability (worker rights, fairness and equity)' in enabling organisational purpose.

Areas the board could more effectively support and enable leadership

CEOs view board effectiveness as an important contributor to organisational performance. CEOs identify that boards could more effectively support and enable leadership, with 57% highlighting more frequent reflection on board effectiveness, 40% stronger member engagement and commitment, and 40% improved focus on long-term rather than short-term concerns. Education and training organisations are 9 percentage points more likely than total not-for-profits to identify stronger alignment on organisational values and purpose to enable organisational purpose as an area for improvement.

Education and training: 93 CEOs

Section 2: CEO Personal Motivation, Values, and Alignment

Personal CEO motivations

CEO motivation is an important issue that has not been studied directly by asking CEOs. Attracting and retaining the right CEO is an important governance issue. The existing literature does not directly measure CEO motivation, instead inferring it from incentive structures (such as compensation design), observed CEO behaviour (e.g. risk-taking or earnings management), and governance outcomes (e.g., pay-performance sensitivity or compensation levels). CEO responses suggest that purpose-driven and intrinsic motivations rank highest, followed by reputation-related motivations, while financial or visibility-related factors are least prominent. Specifically, 78% of CEOs rated core organisational purpose as very important, followed by stakeholder, public or community value (74%) and intrinsic motivation (58%), whereas only 4% rated total pay level and 4% rated variable or long-term incentives as very important motivators.

Key factors CEOs view as determinants of their pay

While the literature emphasises market benchmarks, managerial bargaining power, and incentive alignment, CEOs instead view pay as primarily driven by perceived individual ability and board judgment, with relatively little importance placed on negotiation or financial motivation. Specifically, 65% rating ability (skills and potential to deliver), 58% experience (past roles, achievements) and 52% organisational size and scale as very important determinants of pay, compared with 16% for negotiation at the time of appointment, 12% for financial motivation and 9% for stakeholder or political influence. CEOs view remuneration as recognition of the strategic value they are expected to create and the risks they assume in delivering organisational outcomes. Education and training organisations are 8 percentage points less likely than total not-for-profits to consider the board's assessment of performance as a key determinant.

Education and training: 93 CEOs

CEO's views on fixed and variable pay

Most CEOs agree that 'stable pay is preferable for personal financial planning' (84%), that 'rewards should reflect sustained, not just annual performance' (82%), and that 'the pay mix should reflect organisational context' (68%). Not-for-profit CEOs are 26 percentage points more likely than for-profit CEOs to agree that stable pay is preferable for personal financial planning, showing a stronger preference for income predictability, likely reflecting lower, more constrained remuneration levels. Overall, CEO responses show no evidence of self-interested, short-term, or rent-extractive behaviour assumed in the academic literature.

CEO perspective on the impact of current incentives being made longer-term

Most CEOs agree that longer-term incentives tend to 'signal that long-term value creation is a priority' (77%) and 'provide stronger alignment with long-term mission' (66%). Despite academic research suggesting executives prefer more immediate pay, CEOs are most neutral that they 'make pay outcomes more uncertain' and 'make pay less fair'. Many said it is unlikely or somewhat unlikely that it would 'increase the likelihood of leaving the role'.

CEO's views on the credibility of pay-linked KPIs for their own performance

CEOs believe that pay-linked KPIs are most credible for 'service delivery, quality and outcomes' (75%) and 'financial performance' (56%), moderately credible for 'employee engagement and wellbeing' (53%) and 'organisational culture and values' (52%), and least credible for 'stakeholder satisfaction' (43%) and 'environmental or social impact' (24%). Many see these measures as somewhat credible, with very few rating any measure as not credible. Education and training organisations are 7 percentage points less likely than total not-for-profits to agree that employee engagement and wellbeing is a credible and fair way to assess CEO performance.

Education and training: 93 CEOs

CEOs offered below-expected remuneration during their time in leadership

- Not offered below-expected pay
- Offered below-expected pay

Education and training organisations

A key governance signal is potential misalignment between CEO remuneration and candidate expectations, creating attraction, retention, and leadership continuity risk. During their time in leadership, 59% of CEOs reported experiencing total pay offers below what they felt was appropriate, often leading to career-management responses, whereas 40% did not. CEOs in education and training organisations were 4 percentage points more likely than total not-for-profits to have been offered below-expected pay.

Leader consequences of lower-than-expected pay offers

Boards risk weaker leadership quality, poorer strategic continuity, and reduced ability to attract and retain capable CEOs when pay is set below appropriate market levels. The most common responses for CEOs who received lower than expected pay offers included that they felt undervalued (53%) and accepted the role and negotiated non-financial benefits (35%), highlighting that executives often respond to perceived underpayment by managing their career trajectory around it, with potential implications for longer-term commitment and board-CEO alignment. CEOs in education and training organisations were 10 percentage points more likely than total not-for-profits to have felt undervalued.

Education and training: 93 CEOs

Section 3: Executive and Senior Leaders Signals, Pay and Incentives

Signals of strategy, culture, and sustainability for executive & senior leaders

Leadership incentives, KPIs and succession decisions aligned with sustainability, culture and strategy are social and governance mechanisms as they determine how effectively leadership behaviour is shaped, monitored and held accountable for delivering organisational purpose and sustained value creation. 54%–55% of CEOs integrate core strategic performance into executive hiring, promotion, succession and KPIs, compared with 45%–48% for culture and 34%–39% for sustainability. Reward systems have a stronger focus on strategic goals rather than their execution (culture) or being a responsible citizen (sustainability).

Senior leader behavioural alignment with organisational purpose and values

Alignment between leadership behaviour, decision-making and representation influences organisational trust, inclusivity and long-term effectiveness. Between 78% and 82% of CEOs report that senior leaders strongly support organisational purpose through communication, modelling and decision-making. In comparison, only 53% believe leaders challenge misaligned behaviour, and 52% say leadership diversity reflects the community and stakeholders, highlighting an opportunity to align behaviour and structural inclusivity.

Executive remuneration framework effectiveness

Effective remuneration systems are important because they support fair, performance-linked pay, strengthen accountability, and help align leadership behaviour with organisational objectives while maintaining trust in social and governance processes. 56% of respondents agree or somewhat agree that current frameworks support fair and effective pay decisions, and 43% agree or somewhat agree that expectations can be aligned with performance pay. In contrast, 36% perceive pay-setting to be constrained by reputational or external risk.

Education and training: 93 CEOs

Factors influencing executive or senior leader pay decisions

Executive and senior leader pay decisions are driven primarily by governance factors, including financial performance, benchmarking, stakeholder expectations and formal pay policies, which reflect how boards exercise oversight, manage accountability and align remuneration with organisational objectives. Social factors are also evident, with employee retention, motivation and internal equity concerns reflecting workforce and cultural implications of executive pay decisions, including fairness, trust and cohesion. Comparatively, external pressures such as advisory firms, media or political risk have limited influence. CEOs in education and training organisations were 8 percentage points more likely than total not-for-profits to cite financial performance or budget constraints.

Percentage of staff motivated by sustainability goals

The majority of CEOs believe that staff are highly aligned with the organisation's purpose, including social, environmental, and broader stakeholder objectives, with the average CEO estimating alignment at around 85% of all staff. This percentage is meaningful because it indicates the extent to which that purpose is embedded in employee behaviour, shaping execution capability, cultural coherence, and the credibility of the organisation's ESG commitments.

Willingness to support culture shift for sustainability goals

- Not at all open to change
- Minimally open to change within current norms
- Moderately open to change with structured plans
- Fully open to transformational change

An organisation's willingness to pursue cultural change for sustainability is important because it signals whether environmental and social commitments can be embedded in organisational behaviour and governance, rather than remaining at the level of policy or reporting. 90% of organisations are willing to pursue cultural change to support sustainability goals, with 40% favouring structured change and 50% open to transformational change. Because willingness is high, organisations may benefit from targeted support such as practical tools for embedding sustainability, leadership guidance, and staff or board training to enable deeper, systemic change. CEOs in education and training organisations were 5 percentage points less likely than total not-for-profits to be fully open to transformational change.

Education and training: 93 CEOs

Section 4: Sustainability Strategy and Investment Priorities

Impact of **environmental** and **social** investments on organisational value

Do not add value

Add value

The majority of CEOs (93%) believe investing in environmental and social practices enhances their organisation's value, while 7% say it does not. This highlights that most CEOs view environmental and social practices as value-enhancing, reinforcing their role as a core driver of long-term strategic decision-making rather than a peripheral concern. CEOs in education and training organisations were equally likely as total not-for-profits to believe these practices add value.

Reasons sustainability adds value

93% of CEOs say sustainable practices enhance their organisation's value, primarily due to ethical responsibility (84%) and integration into strategy (69%). CEOs in education and training organisations were 9 percentage points less likely than total not-for-profits to believe these practices aid in enhanced risk management.

Sustainability does not add value due to:

7% of CEOs do not believe that sustainable practices enhance organisational value, primarily due to negative financial or budgetary impact (67%) or low priority despite stakeholder preference (50%). Education and training organisations were 32 percentage points more likely to note the negative financial or budgetary impact.

Agreement with statements on sustainable business practices

The majority of CEOs agree that sustainable practices demonstrate a long-term commitment to ethical operations (88%), support organisational credibility and trust among stakeholders (80%) and reflect leadership accountability in sustainability challenges (77%). Sustainable business practices are viewed as an integrated driver of competitiveness, stakeholder trust, and risk management, rather than a peripheral activity.

Education and training: 93 CEOs

Material **environmental** factors driving strategic priorities and long-term value

Environmental sustainability factors

CEOs view energy and fuel efficiency (54%) and waste and hazardous materials (42%) as top drivers of value. Education and training organisations are less likely to view climate adaptation and resilience as material.

Product and supply chain sustainability factors

CEOs view product quality and safety (33%) and sustainable material sourcing (32%) as the primary drivers of long-term value. Education and training organisations are less likely to view supply chain resilience as material.

Material **social** factors influencing strategic priorities and long-term value

Workforce sustainability factors

CEOs view employee well-being (96%) and employee health and safety (89%) as the primary workforce sustainability value drivers. Education and training organisations are less likely to consider workforce sustainability skills as material.

Stakeholder sustainability factors

CEOs view community relations (82%) and human rights (66%) as primary social stakeholder drivers of long-term value. Education and training organisations are less likely to view accessibility and inclusive design as material.

Material **governance** factors

Governance sustainability factors

CEOs view 'leadership and board policies' (85%) and 'formal codes, ethics, anti-corruption' (71%) as the primary governance drivers of long-term value. Education and training organisations are less likely to consider 'data governance' as material.

Approach to sustainability strategy

The most common approach to sustainability is none: no formal sustainability approach or initiatives (33%).

Education and training: 93 CEOs

Key barriers to integrating sustainability into strategy and operations

Organisations see high initiative costs (57%) as the most common barrier to integrating sustainability into strategy and operations, followed by weak links to operational outcomes (38%) and lack of standards or benchmarks (28%). CEOs in education and training organisations were 11 percentage points less likely than total not-for-profits to see measurement and reporting costs as a barrier.

Government or industry body actions that most support sustainability goals

Based on selection frequency, CEOs identify financial incentives to accelerate investments (62%) and clear, consistent reporting standards (37%) as the most important actions government or industry bodies can take to support sustainability goals, followed by investment in sector-wide skills and capability (31%). CEOs in education and training organisations were 10 percentage points less likely than total not-for-profits to see procurement or grant criteria to drive adoption as important.

Willingness to pay for greener outcome Tolerance for sustainable project delays

58% of CEOs would pay a moderate premium (5%–10%) for greener technology: 22% would pay a premium of over 20%, while 20% would not pay more. CEOs in education and training organisations were 13 percentage points more likely than total not-for-profits to say they would pay up to a 10% premium.

Most CEOs tolerate short delays for higher environmental or social gains: 41% up to 1 year, 10% up to 3–5 years, and 23% would not delay. CEOs in education and training organisations were 4 percentage points less likely than total not-for-profits to say they would delay if outcomes justify it.

Education and training: 93 CEOs

Summary: Overall influence on long-term organisational performance

Impact of environmental, social and governance sustainability on factors

ESG sustainability positively impacts long-term performance, particularly ethical decision-making and long-term focus. CEOs in education and training organisations were 7 percentage points less likely than total not-for-profits to say their ESG approach positively impacts organisational value.

Demographics: CEOs and Boards

Number of employees

CEO gender identity

For-profit / not-for-profit

Female board representation

Women comprise 47.4% of the NZ workforce (Household Labour Force Survey, June 2023). The not-for-profit sector is more gender-balanced than the for-profit sector, with just over half of CEOs being women and most boards gender-balanced, with slightly more female- than male-dominated boards.

Ethnic board representation

The 2023 NZ Census showed 47% identify as either Māori (17.8%), Pasifika (8.9%), Asian (17.3%), or other (3%), with 53% primarily NZ European/Pākehā. Not-for-profit boards closely reflect this ethnic diversity, indicating comparatively stronger ethnic representation in governance than in for-profit boards.
